

EPOTHANE

Epoxy Semi-Rigid Crack Filler

Epothane is a 2 component Epoxy Joint Filler designed for filling small moving cracks found in concrete surfaces. Epothane has an elongation of 58% allowing it to expand and contract without cracking under normal circumstances. The ultra-low odor of the system, and its low solvent levels, allow it to be applied without disabling surrounding operations during application and cure.

Features and Advantages:

- ✓ Low Odor
- ✓ Flexible
- ✓ Incredible Adhesion
- ✓ Ideal for filling small moving cracks
- ✓ Sold in Pre-Measured Kits
