

Kwik-Top

Concrete Re-Surfacer

2 Component Overlay

A two component product, Kwik-Top consists of a Proprietary Liquid Polymer, specially formulated Cement blend, aggregate and modifying additives which are mixed by the applicator on the job-site. The simple mixing formulation virtually eliminates on-site mixing errors and assures the end user that the applied product is of the same high quality from the factory.

Kwik-Top has been specially formulated for the well balanced combination of performance, ease of installation and minimal down time. The Grout Color also acts as the primer and best of all it can be rolled onto the concrete. No more troweling is needed for the first layer. This saves time and money. Use Kwik-Top to apply broom, knock-down, troweled and orange peel finishes over sidewalks, pool-decks, driveways or other floor surfaces.

Kwik-Top is a multi-use cementitious protective coating and re-surfacer designed for application over a broad range of surfaces such as concrete, brick, metal, masonry and wood. Kwik-Top is available in 16 different integral colors and accepts Versa-Stain to obtain a variety of natural looks.

Available Finishes:

- Knockdown
- Orange Peel
- Skip Trowel
- Broom Finish
- Simulated Tile
- Simulated Flagstone
- Weathered Concrete

Kwik-Top may be integrally colored to one of 16 standard colors chosen from Versatile's Color Selector Guide, or painted with a durable acrylic topcoat (optional) for 18 additional colors. Kwik-Top is the perfect product to use when creating simulated tile or other patterns using grout tape or pre-fabricated templates. Kwik-Top can be used to re coat and re-surface worn concrete surfaces such as patios, pool decks, sidewalks, walkways and parking garages.

Apply by brush, roller trowel or spray to achieve a variety of surface appearances such as broom finishes, flat trowel, skip trowel, and knockdown texture. Kwik-Top is normally installed at 1/16". The resulting combination when applied by brush, broom, trowel, roller, spray or squeegee produces a tough water-resistant coating with many desirable properties.

Advantages

Low Odor

Easy to install

Economical

Water Clean up

Various Textures and Finishes

Long Pot Life

Water-Resistant

Abrasion-Resistant
