

VERSA-CRETE

1/4 to 1/2-Inch Concrete Overlayment System

Versa-Crete is a polymer modified decorative thin stampable overlayment system designed to produce architectural paving finishes similar to conventional stamped concrete. Versa-Crete has very high compressive strength and can be left exposed to commercial traffic. The system consists of 2010 primer, 2010 Liquid, 2010 stamping Mortar, Integral Color Pack, Stain and Clear Sealer. Versa-Stamp stamping mats can be used with the Versa-Crete system with little or no modification to traditional stamping techniques.

The Versa-Crete paving system is typically installed as a 1/4 to 1/2-inch overlayment. Versa-Crete is a very decorative overlayment which looks like stamped concrete, yet functions as a tough and durable floor. It can offer substantial savings over costly tile and slate patterns while maintaining a wide pallet of color options. Versa-Crete is designed to be installed over our waterproof membrane systems to provide a composition waterproof and decorative stamped floor finish.

Features and Advantages:

-  Tough
-  Durable
-  Low Odor
-  Economical
-  Water-Based
-  Abrasion Resistant
-  Many Different Mix Designs
-  Great Adhesion to Concrete
-  Looks Like Stamped Concrete
