

VERSA-STAIN

A Unique Concrete Staining System

VERSA-STAIN was created to fill a need in concrete beautification. The ability of Versa-Stain to be applied to a surface in a wet over wet manner makes it the stain of choice for decorative concrete professionals. Versa-Stain colors meld together creating a natural look. VERSA-STAIN will provide you with a stained concrete surface that has a natural color and consistency that is repeatable, unlike chemical stains. VERSA-STAIN is an ambient self-cross linking stain that withstands water and mild chemicals. The stain can be applied with a pump up sprayer, HVLP sprayer, airless, sponge, foam brush or rag to create the desired effect you are looking for. Versa-Stain is available in 12 standard colors. These 12 colors can also be blended together to achieve more color variations.

Features and Advantages:
